

SPINNEX®

YOUR FISHING GURU

Beetle

This model is one of the most universal spinning lures which can be used in any conditions in both still and running water. Due to medium angle (app. 45 degrees) of elliptic blade work spinners from this series work very stably in water during slow drawing. In running water it is possible to use the fishing technique both downstream and upstream. Smallest sizes - 0 and 1 - are perfect for perch, chub and ide fishing. Sizes 2 and 3 are very good models of trout spinners. Size 4 is mainly used for pike fishing. Wide colour range enables usage of these spinners during various weather and water conditions. In this series there are models equipped with a tassel on the anchor and so called tandems: spinners with double blades and spinners connected to hook dressed in with twister, and also spinner connected with hook dressed in ripper or rubber octopus

Very effective fishing method with these spinners is so called "half drift" fishing. After casting perpendicularly to the bank or against the stream wait till the spinner drops at the required depth and strain the line delicately raising the tip to initiate spinner work. Then let the river current drift the spinner to your bank and always control the line tension taking up the slack with the reel. When the spinner reaches your bank spool the line drawing the spinner along the shoreline.

Available colours

The series of spinning lures with wide blades shaped similar to the model Firefly but they are more oval. They are characterized by perfect work both upstream and downstream in river fisheries and in fisheries with still water. Characteristic feature of this series is a big eye situated on the blade which increases attractiveness and fishing ability of these spinners. These lures come in sizes 0 to 3. They are mainly intended for perch, ide, chub and trout fishing. In this series besides an eye there are holograms resembling fish scale on the blade. In this series we have also models equipped with a tassel on the anchor, and so called tandems: spinners with double blades and spinners connected to hook dressed in a twister, and also spinner connected to hook dressed in a twister, ripper or rubber octopus.

CatEye

These spinning lures resemble the series Big-Eye but they differ in characteristic folding on the bottom part of the blade. Due to this folding the spinner work causes bigger hydroacoustic wave which stimulates prey to attack. The blade of this spinner rotates at a greater angle from the axis and starts to work immediately after hooking the spinner. These spinners are dedicated to fishing in both dead water and flowing water where it is possible to fish upstream and downstream. There are 5 sizes of these spinners – 0-4. The smaller sizes are perfect for chub, ide, perch, and trout fishing. Sizes 3 and 4 are good for pike fishing. In this series there are also tandems which consist of two blades.

Practical advice

Fishing in shallow watery areas near the aquatic vegetation. After casting start immediate line spooling. Hold your fishing rod raised high to draw the spinner above the plants being under the water surface. While drawing you can maneuver the fishing rod to right or to left to avoid the plants.

Available colours

Firefly

These spinning lures with wide blade are perfectly suitable for fishing in still water. The blade working angle of about 60 degrees. This is the reason why these spinners are perfect baits also for fishing downstream. Characteristic wide blade rotations of this model cause a big hydroacoustic wave which prey fish can't fail to attack. Thus many trout fishermen have already met beautiful river trout. In this series there are sizes from 0 to 5, so it is possible to use them for all kinds of prey. Sizes 1 and 2 are especially recommended for chub, 2 and 3 for trout and 4 and 5 for pike and catfish fishing. Reach colour range enables the usage of these spinners during different weather conditions and various water transparency. In this series there are also models equipped with a tassel on the anchor and so called tandems: spinners with double blades and spinners connected who the hook dressed in a ripper or rubber octopus.

Practical advice

Fishing method downstream, very effective in river trout fishing. Cast upstream controlling the spinner flight, close the reel bail and start immediate line spooling when the spinner falls to the water. Fit the speed of line spooling to the current speed to ensure constant spinner work.

Gad-fly

This spinner shape is similar to the series Big Eye but they differ in elliptical blade which is more extended, and also in weight. The spinners from this series are lighter. The artwork is also different. This series is featured by very stable work of the blade which constantly rotates even during very slow drawing. The spinners have versatile use in both still and running water. The smallest „number one” spinner is perfect for perch, chub and ide. The bigger spinners - 2 and 3 - are excellent for trout and spinner number 4 works well in pike fishing. In this series there are also the models equipped with a tassel on the anchor and so called tandems: spinners with double blades and spinners connected to the hook dressed in a twister or rubber octopus.

Fishing from the bank of the pool with still water using fan casting technique. Go as far as possible into the deep and use wagging technique. Cast as far as possible starting to cast as close as possible to the bank from the left or right side. Then cast several degrees aside and so on till you reach the bank. Try to fish at different depths and use variable speed of spinner pulling.

Mosquito

These spinners with extended blade which vibrates near the body and rotates at working angle of ap. 30 degrees. Such construction makes the spinners not to resist the water strongly, it predisposes them to fishing in running water and for deep drawing in still water. In the rivers these spinners work well during fishing upstream. These spinners are effective for all predators, number 3 is especially recommended for Asp fishing. Smaller models are effective for perch, chub, ide and trout fishing. Size 4 is appreciated during trout fishing in the rivers as also in pike fishing in deep lakes. These spinners are of many colours giving possibility of matching them to the weather and water conditions. In this series there is also used the connection of two spinners in tandem and the spinner connection to the hook dressed in a ripper or rubber octopus.

* twister (TW), ripper (RP), chwost • fly • Fliege • хвост (XB),

Perch

This is the series of pendulum lures of the shape of famous alga. This is one of the most classical and versatile pendulum spinners for sea trout and salmon. The spinner works well in running and still water. Due to deeper curve of this spinner it works well even by very slow drawing, imitating fish motion. It is possible to fish with it using different techniques: unvarying pulling, pulling with breaks, jigging, twitching or effective so called "half drift" method in the river. The biggest model works well as trolling bait. The model of 21 g comes in bicolor silver-copper version which must be interesting for sea trout and salmon fishermen.

Practical advice

Fishing in deep cavities and rubbles in the rivers using the method of holding. Cast to a cavity or above a rubble, wait till the spinner reaches required depth. Don't pull but hold the spinner in one place raising and lowering the tip. Then rotate a handle several times and hold the spinner in one place again. Repeat this cycle several times.

Pike

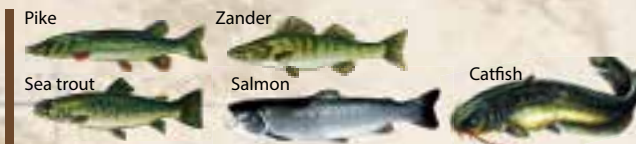

These are pendulum lures of a shape of one of the most popular pendulum spinners – gnome. Many spinners chasing after pike use these spinners, but also other prey such as catfish or zander attack this bait eagerly. Due to its lazy work in the water it accurately imitates the motion of ill fish. This spinner can be successfully used in both still and running water. Casting this spinner you can achieve far distances and precisely reach predator potential hiding place. It is widely used in different fishing techniques. Smaller models can be drawn with unvarying speed, with breaks or with twitch. Sometimes you can try quick "Asp" drawing under the surface. The two biggest models can be successfully used in trolling method. In this series there is a spinner called Pike Acoustic which consists of two spinners to elicit additional acoustic impulses.

Pike Acoustic

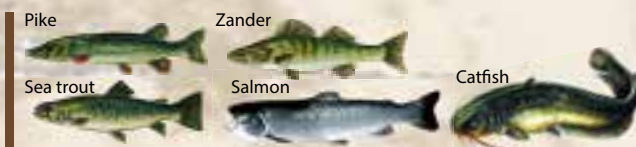

Splake

This is extremely effective spinner for pike, zander and catfish. It can be successfully used in still and running water. It works well during the slowest drawing. You can use it for trout fishing during low water level in the rivers.

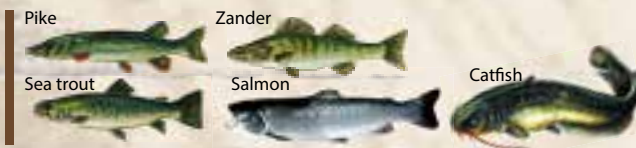

Keta

This is very universal spinner for use in both still and running water. It is effective for pike, zander and catfish fishing. It can be also used for trout fishing. It works especially dynamically in the river, sometimes it starts to produce rotary motion which makes it more effective.

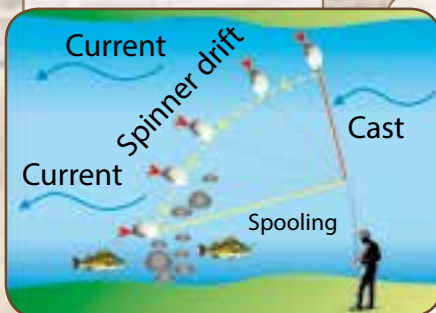

Sima

There are two weight options of this spinner – 14 g and 18 g. This is an excellent proposition for trout and salmon fishers. These copper spinners resemble well-known pendulum lures. They are very effective in the rivers during half drift fishing. These spinners are also perfect lures for pike.

Practical advice

These spinners work well in so called "half drift" fishing. After casting parallel to the bank or a little bit against the stream wait till the spinner drops at the required depth and delicately strain the line raising the tip to initiate the spinner work. Then allow the river current to drift the spinner to your bank, constantly control the line strain by taking up the slack with the reep. When the spinner reaches your bank spool the line drawing the spinner along the shoreline.

Osa

This is a classical pendulum lure which shape resembles well-known hornwort. It is dedicated to both still and running water. It is characterized by excellent work in every drawing technique. In a fast current and during fast drawing it starts rotary motion. This spinner can be used for pike, zander and catfish as also for trout and salmon fishing.

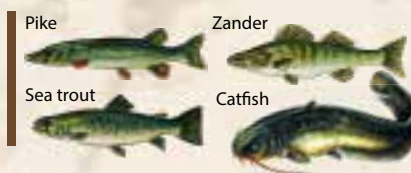

Lady

This spinner shape resembles alga but it is more elongated. It is perfect for catfish and zander fishing and it is especially effective during night spinning. It is very effective during slow drawing and drawing with breaks.

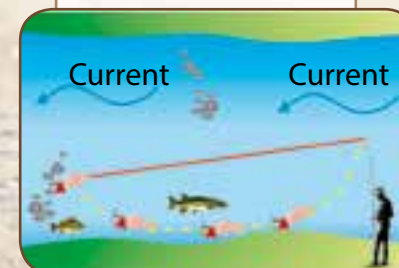

Atom

Very universal spinners come in 2 colours: silver and copper. They are perfect for river pike, zander and trout and salmon fishing. You can use a lot of spinner working techniques matching the proper technique to the conditions in the fishery. During a quick working and in the fast current it starts to produce rotary motion. During the slow working it produces swinging motion.

Practical advice

Spinner drawing along the bank upstream. Cast parallel to the bank and wait till the spinner drops on the bottom. Then pick the spinner up to work and draw it in your direction. Control the distance of the spinner from the bank mowing the tip from or to the bank. You can stop rotating the reel for a moment allowing the spinner to work for a certain period of time in one place.

24 g

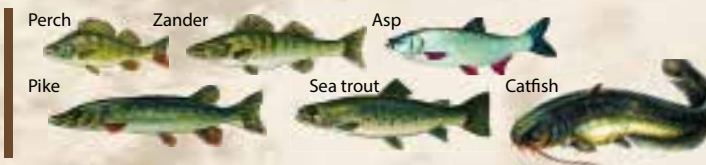

Practical advice

Boat Fishing with interrupted spooling. Use this method in the flat places in the lakes. Cast as far as possible. Wait till the spinner drops on the bottom – the line isn't strained. Start to spool the line with the help of the reel. Stop spooling after several rotations, wait a moment and start spooling again. Repeat this cycle several times. You can speed up or slow down spooling between breaks.

Tramp

The spinners shaped like well-known walrus work well for zander, catfish and pike fishing in the rivers and sea trout fishing from the shore. They work well for fishing on the drop. They are of one size and two weights: 20 g and 24 g.

*20 g/24 g

Pjevs

This narrow pendulum lure is dedicated mainly to surface Asp fishing. This spinner comes in one size and weight –2 g. Very effective fishing technique with this spinner is quick drawing just under the surface upstream slightly across the current – the spinner moves in a zigzag manner. This spinner can be used in sea trout and garfish fishing from the shore.

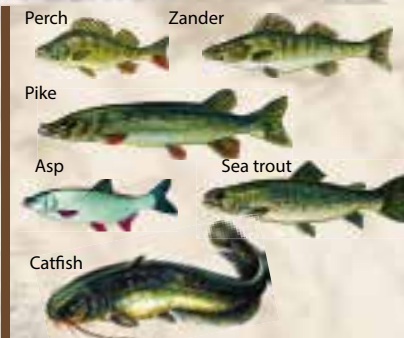

PJ-1-S

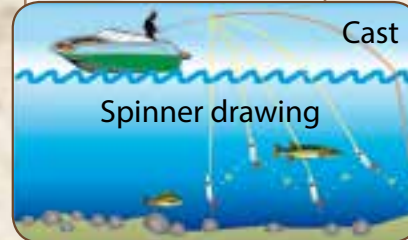

12 g

Rolf

This spinner is similar to Pjevsa but it is heavier and bigger. There are two options: 20 g and 28 g. This spinner is dedicated to Asp fishing at big distances as also for sea trout and garfish fishing from the shore. Effective fishing technique with this spinner is quick drawing under the surface with tip raised high.

Practical advice

Cast

Spinner drawing

Fishing on the drop from a boat. After casting wait till spinner drops on the bottom. Then pick up the spinner with a quick movement of the fishing rod upwards. After that let the spinner drop loosely controlling the line tension. Repeat this cycle several times.

Sito

This is a bait which connects the features both of lipless krankbait and light pilker. It is possible to fish with it on the drop or to jig. During drawing with unvarying speed the bait moves in zigzag way by turns left and right. During jerking it works very intensively with characteristic approaching the surface, imitating ill fish. On the drop it starts swinging motion. It is very effective bait for pike especially during fishing in still water. Many spinners fishing pike in the lakes became convinced of effectiveness of this bait. In the sea it is possible to use Sito in shallow areas near the shore.

Flash

Special spinner to sea spinning is dedicated mainly to fishing in shallow fisheries. It is effective for jigging, fishing on the drop and jerking. This spinner works well during quick "Asp" drawing. During the drop it moves in zigzag way and starts rotating movement around its axis. It is effective for garfish and sea trout from the seashore.

Tandem Project

This is connection of the rotating lure and the pendulum lure. This blure comes in many sizes. This is the reason why we can use it in different fisheries, both in river and still, shallow or deep water. It is very effective for Asp, chub, pike and zander. During fishing with these tandems it is possible to use many techniques of lure drawing. In the river this lure works well during slow drawing across upstream with breaks during pulling down. In still water effective technique is drawing with unvarying speed, with jerking the tip from time to time. Various colour range enables use of these tandems in different weather and lighting conditions in the fishery.

Stord

Universal pilker of big weight span with a help of which it is possible to fish both in shallow fisheries and deep sea. Its side is oblate and curved. So it is characterized by strong work. It is very effective during jigging and fishing on the drop. Wide colour range enables proper fitting of this pilker to lighting conditions and intensity of cod preying.

H11

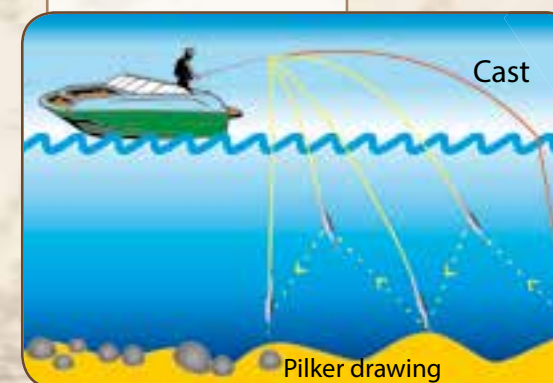

Fresvik

This Pilker is similar to the series Gamvik but the mass of thus pilker is evenly distributed. This is the reason why during dropping the pilker doesn't dive but to drops horizontally resembling ill fish. That's the reason why it is willingly attacked even by cautious fish.

Cod

Practical advice

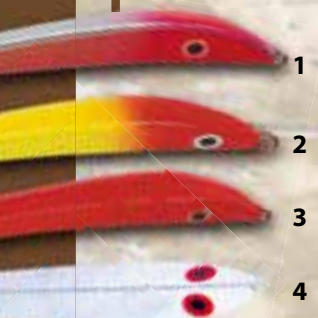

Fishing on the drop. Cast the bait as far as possible and wait till it drops on the bottom. Then you should tense the line and dynamically pick the pilker up from the bottom as high as possible. Then wait till the bait drops on the bottom controlling the line tension during the falling. Repeat this cycle several times.

Pilker Magnum

This Pilker is dedicated to fishing in very deep fisheries. During dropping and raising it moves to the side which allows to fish in a quite a big area near the bottom. It is ideal for fishing above the plate bottom which is free from thorns.

Dorsz

AM-1-H3
AM-2-H1

Amal

This pilker is dedicated to deep fisheries located near sunken shipwrecks. It drops on the bottom very quickly and enables effective vertical fishing. Due to reach colour range it is easy to match it to the lighting and water conditions and.

Dorsz

Sotra

Tis pilker is similar to Amala but its rear part is oblate this is the reason why it is a good bait for fishing on the drop. This pilker is allocated to fishing in very deep fisheries.

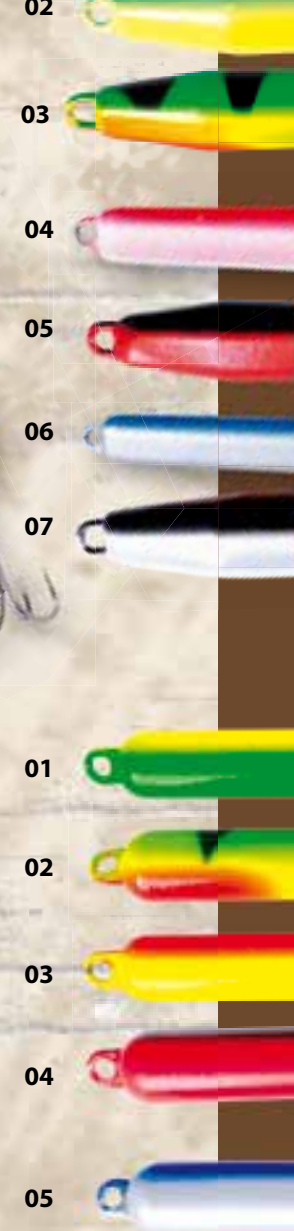

Cod

Solund

Pilker resembling a cigar in its shape is dedicated to deep cod fisheries located near sunken shipwrecks. It works well in the vertical drawing technique. It drops and reaches required depth very quickly.

Cod

Hand painting patterns

Specialty of our company is hand painting of spinners. Due to this painting method of spinners, it is possible to reproduce natural colours of fish and to match spinner colour to the weather conditions, water transparency or 99 lighting conditions of the fishery.
